

Press Release

[Praj provides open access sanitizer technology to help combat spread of Covid 19](#)

Pune, April 01 2020

Hand sanitizers are an effective measure to curb the spread of the novel Corona virus. Following the guidelines issued by the World Health Organization and Ministry of Health, Govt. of India, the sanitizer market is experiencing exponential demand. This has opened a huge requirement of sanitizers and disinfectants in India and across the world.

The formulation in sanitizers has at least 80% alcohol that neutralises the virus and thus prevents its spread. Sanitizers can be produced from value added processing of alcohol made in distilleries and bottling plants.

Praj Industries has developed unique process technology in its government approved (Dept. of Scientific and Industrial Research, GOI) state-of-the-art research centre that helps formulate alcohol into high quality sanitizers.

With over 750 references across the world including more than 450 in India, Praj is well positioned to facilitate the production of sanitizers leveraging on its captive process plant customer base.

Understanding the seriousness of the fight against the virus and in response to the appeal by Ministries of defence and health, GOI, Praj has decided to undertake the following major initiatives.

1. Offer open and free access on its company website of all design, engineering and formulation mixture packages to produce sanitizers [for standardised plant capacity of 2KLPD (20,000 bottles of 100 ml each) and 5KLPD (50,000 bottles of 100 ml each)].
2. Provide remote engineering and commissioning assistance to produce sanitizers.

Praj is also geared up to manufacture and supply specialised reactors required for production of sanitizers on a fast-track basis.

Sharing his thoughts on this decision, Atul Mulay, President-Bioenergy business said, "We are pleased to offer Praj's know-how and engineering package that adheres to WHO guidelines for the production of sanitizers. We are sure our sincere contribution of providing a plug and play package will boost production at this critical juncture and help combat the spread of the virus."

The aim of this decision is to contribute towards the health and safety of people across the country and India's efforts to tackle Covid19 pandemic.

Praj Industries Limited:

Praj, India's most accomplished engineering company in the field of industrial bio technology, is driven by innovation and integration capabilities. The company is a torch bearer of Bio-mobility, offering technology solutions globally to produce renewable transportation fuel. Praj's diverse portfolio comprises Bio-energy plants, Renewable natural gas facilities, Critical process equipment &

skids, Breweries, Zero liquid discharge plants and High purity water systems. Over the past three decades, Praj has focused on the environment, energy and agri-process industry, with customer references across 75 countries. Praj Matrix, the state-of-the-art R&D facility, is the backbone for the company's endeavors in sustainable decarbonization through circular bioeconomy. Led by an accomplished and caring leadership, Praj is a socially responsible corporate citizen. Praj is listed on the Bombay and National Stock Exchanges of India.
